# LEGACY

OLD APPS RUNNING SECURELY  
IN TODAY'S WORLD

# INTRODUCING

# LEGACY

...our solution enables you to extend the life of business-critical legacy applications within your organisation, enabling you to run any application on a modern operating system securely and efficiently. Whether it's running an incompatible Legacy application on Windows 10, or a 16-bit application on any 64-bit Platform, if you have a legacy application that is still critical to your business, we can solve that problem for you!

## Enable your Windows 10 Migration

Any Windows 10 Migration needs to undergo an application rationalisation exercise to ensure that the correct business applications are ported onto your new platform.

Whilst the majority of enterprise applications can be handled in a relatively straightforward manner, the cost and effort of upgrading, or re-coding for a legacy application migration, can potentially run into hundreds of thousands of pounds.

Legacy by APPtechnology is a physical / private cloud solution that allows you to migrate 100% of your users to Windows 10, by provisioning your legacy business applications in a secure and

scalable manner. No migration-killing applications, no unsupported OS, no unpatched exposure.

Your users can seamlessly run critical 16-bit or old NT and XP 32-bit applications provisioned from a secure 64-bit Windows platform, often with improved performance. Capable of running on virtually any device, on any platform securely today, we can address your user applications as well as your legacy server estate.

Whether just a handful, hundreds or even thousands of users needing access at the same time, from a single legacy application to tens or hundreds of applications that need to be supported, Legacy by APPtechnology flexibly covers your changing business needs.

## Windows 10 Red Applications

Finding a 16-bit application or legacy 32-bit application that is still core to your business can become a blocker for a Windows 10 migration.

Application compatibility can be particularly challenging for enterprises migrating onto a 64-bit platform in pursuit of the best security features.

Historically, migration compatibility has flagged 'red applications' that didn't have a simple upgrade path or fix. The only solution was to leave physical or virtual machines running an old version of Windows in the estate, and accept the security vulnerabilities and support overheads.

With Legacy by APPtechnology we can run end-of-life software and 16-bit applications on Windows 10, and get your migration back on track.

HOW LEGACY

# WORKS

Legacy can be provided on premises, public or private cloud or as a hybrid solution. You have the flexibility to scale up the concurrent users and applications to meet your business demand. With capability to deliver applications to Windows, Android or IOS devices or any HTML5 compatible browser you can address end of life legacy application issues as well as providing BYOD options to your mobile workforce.

Whether installed in your datacentre, in an external Tier 3 facility or in the cloud, Legacy by APPtechnology delivers a cost-efficient platform to enable a consistent and secure location for critical ageing applications, allowing a 100% rollout of your target OS.

Capable of supporting 16-bit applications and 32-bit applications, out of date software suites and plugins, as well as platforms like PDP and Solaris, we can securely deliver your ageing applications back into a modern Windows 10 environment as a cost-efficient and scalable service.

## Future Proof

Legacy by APPtechnology provides a simple and efficient platform to deliver Legacy applications to the devices you need, irrespective of upcoming OS build or platform changes.

This flexibility allows you to run an ageing in-house VB application on an iPad, or applications like Microsoft Office on a Chromebook, once your Legacy solution is in place the combinations are endless.

With options to use dedicated clients for Windows, IOS and Android, as well as clientless delivery to any device capable of rendering HTML5, it is now possible to deliver any app to any device.

# APPTechnology's SERVICES

At APPtechnology we enable our clients to reduce the cost of deploying and managing applications across their business. From SCCM to application lifecycle management, our UK team and solutions remove project bottlenecks and bring ongoing savings into business as usual.

### APPtechnology's other services:

- Windows 10 Migration delivery
- SCCM Upgrades and Implementations
- Windows 10 Evergreen Management
- Application Packaging
- Browser Migrations
- Active Directory user data improvement
- Project Consultancy and Resourcing

### Our clients include:

- The AA
- Nuclear Power Generation
- Alere
- B&Q
- Financial sector
- Universities
- Lloyd's Register
- Legal sector
- G-Cloud and Crown Commercial Service
